

Water & Wastewater Technic WWT GmbH

Your competent partner in water systems' **chemistry**

Water – Source of life

Water is the source of life and is found in all life forms. Clean water, however, is a limited resource and will become an increasingly valuable economic and ecologic commodity. We help conserve water as a resource by offering a combination of water technology, chemical cleaning and water treatment products as well as professional service.

Our company

Water & Wastewater Technic WWT GmbH is specialised in developing and manufacturing chemical and technological products for water treatment applications. Further, we focus upon waste water treatment and water system purification.

With custom-tailored, cost-effective and ecological water management we contribute not only to increasing your competitiveness, but also to saving valuable resources. For example, re-use and recycling of process water decreases water costs while increasing production safety.

As a manufacturer we can offer you the complete range of high-end water treatment technology, giving you advice when planning and using the respective products, providing support from our service staff and delivering spare parts and consumables.

Environmental management

We are an environmentally conscience company. Our staff, as well as the company founders, has been protecting intensively and actively the environment in the fields of chemical water treatment, engineering and service for more than 20 years. When developing and improving our corrosion inhibitors, hardness stabilisers and disinfection products, we always have striven and continue to strive to increase the biodegradability of the base of organic compounds. We continuously develop measures to improve our products and services regarding their environmental friendliness.

Represented throughout Europe

Thanks to our decentralised organisation with service points all over Germany we guarantee you the quickest possible access to our service staff. Our affiliated and partner companies in ten other European countries provide you with a uniform product range throughout Europe. All products are shipped safely by reliable logistics partners and delivered punctually to any location in Europe.

Water & Wastewater Technic WWT GmbH

Your competent partner in water systems' **chemistry**

Our chemical products

- corrosion inhibitors
- hardness stabilisers
- biocides
- disinfectants
- cleaning products
- precipitants
- flocculants
- defoamers
- oxygen scavengers
- pH regulators

Fields of application

Water systems

- cooling systems
- AC water
- sprinkler systems
- drinking water systems
- boilers
- process water
- humidifier systems
- boiler plants
- waste water
- recycling water

In most water systems there is a risk of deposit formation through dissolved solids or contaminants. Especially in cooling circuits formation of organic deposits and growth of harmful microorganisms are possible. Among the most dangerous bacteria are the legionnaire's disease-causing legionella.

Chemical cleaning with our scale and rust removers, disinfectants and system degreasers, according to the effective guidelines, will guarantee the optimum condition of your system and perfectly hygienic water quality.

Our chemical laboratory

Our headquarters is equipped with a lab that, in addition to chemical engineering, carries out water analyses. These analyses allow recognition of environmentally harmful processes in advance. In order to increase the efficiency of these analyses, we cooperate with the accredited chemical examination laboratory Dr. Lörcher, Ludwigsburg, Germany.

Test kits

For testing and monitoring of water systems we offer suitable measuring and analysis devices, so-called "test kits". The easy-to-perform tests allow product concentration measurement or dissolved solids determination. The quick and safe handling allows recognition of changes at an early stage and appropriate measures to be taken. Based upon the resulting data we will compile an individual proposition for the optimum adjustment and operation of your systems.
